

Live Interior 3D Pro Edition goes far beyond standard interior design functionality, including the ability to draw 2D plans and surf 3D environment. It takes you to a more advanced level of interior design, while remaining intuitive in use.

Virtual walkthroughs take you inside the interior and help you realize what needs to be changed in order to achieve perfection. Flawlessly switch between 2D and 3D modes, or select Split mode to view both 2D and 3D simultaneously.

Creating a new interior or remodeling your existing one has never been so intuitive and fun. With the help of Live interior 3D you will look into the future and see the results long before any changes take place.

## Functionality that makes the difference

### Multi-Story Interiors

Create multi-story projects, setting exact ceiling height and slab thickness for every story. Use supplied stairs or define any imported object as stairs.

### Variety of Content

2500+ 3D objects and materials supplied with the program provide enough flexibility in creating unique interiors.

### Advanced Material Editor

Alter any supplied material or create your own from an image or photo using advanced options to achieve the required 3D object surface.

### Google 3D Warehouse™ Integration

Access an online database with an endless number of 3D objects created in Google SketchUp™ that can be downloaded and imported directly to your Live Interior 3D project.

### Import Capabilities

Import custom 3D objects either in popular Google SketchUp™ or 3DS format. Compose your own object and material libraries by creating custom categories, then add selected objects and materials.

### Google SketchUp™ Editing

Modify any 3D object directly from the program using Google SketchUp™ software.

### Interior Illumination

Control the interior light on the fly as you feel necessary – adjust brightness, color and direction of every light source in your project. Light Source Manager allows you to create lamps by adding multiple light sources to any furniture object.

### Geo Orientation and Daytime

Set the geographic orientation of the apartment and the daytime. And even control sunlight and moonlight, which influence the external lighting.

### Professional Rendering

High quality of interior visualization is achieved thanks to advanced rendering. Realistic object shadows and reflections make the interior look 100% natural.

### Wall Designer

Adjust walls by making niches and openings in them. You can also apply different surface materials to walls by creating custom wall panels.

### Export to Google SketchUp™

Export the whole interior project (an apartment or multi-story building) or any selected objects into Google SketchUp™ format, which makes it possible to share the creation via Google 3D Warehouse™.

## Live Interior 3D is perfect for:

- People who are considering how their future interior should look.
- Professional designers who prepare interior presentations.
- Architects that work on the room or house layout.
- Customers who want to see if the furniture matches the current interior.

## Key features

### General

- Support for multi-story interiors
- 50+ ready-made interiors and 2D plans
- 1200+ Object Library, with brand name content
- Google 3D Warehouse™ integration
- Import Google SketchUp™, Ogre XML and 3DS objects
- Add objects to 2D/3D window via Drag&Drop
- Alignment and distributing options for 3D objects
- View objects in Library 3D Preview window
- View and Edit designs in 2D & 3D views
- Various measurement units (fractions supported)
- Runs natively on both Power PC and Intel Mac's

### Editing 3D Objects

- 1300+ Material Library and flexible material editor
- Advanced options to customize doors, windows, columns, furniture
- Wall moulding support (base and crown)
- Wall Designer tool to paint walls in different materials and create custom niches and openings
- Edit any 3D object directly from the program using Google SketchUp™ software (Free or Pro version of SketchUp™ needs to be installed)

### Working with 2D Plans

- Create plans in any scale
- Automatic/custom floor and ceiling creation
- Auto/custom dimensioning
- Custom ceiling height
- Smart guides and object snapping
- Grid support
- Option to fill walls/slabs with color or one of 96 patterns in 2D plan
- Print or export 2D plans to PDF, TIFF, JPEG, PNG

### 3D Environment

- Realistic walk through mode
- Adjust Lighting on the fly
- Realistic light and shadows rendering
- 3 rendering modes to control lights and shadows
- Set daytime (day, night, etc.)
- Real Geo orientation (North, East, South, West)
- Collision detection option
- Adjustable user cameras

## Getting the Result with Live Interior 3D Pro

Create your own camera paths to shoot QuickTime videos of the interior you have designed. Movie quality options go up to HDTV to cover all possible needs.

Support of QuickTime VR technology allows you to create amazing panoramic views of the interior up to 1024x768 pixels. Or, you can make high quality screenshots up to 3360x2400 pixels, as well as set custom resolution value.
